Property Address: 36 Seminary Ave Binghamton, NY 13905

Drive way here

Drive way here!

Drive way here

Budget narrative

The driveway will include, Ecoraster, which is a recycled plastic material that is filled with gravel. Green way pavements in Binghamton will provide these.

The gravel to fill the Ecorasters will come from Barney and Dickenson inc. in Vestal.

Ron Jennings construction will do the excavation and leveling work. They will install the gravel and Ecoraster.

Total cost of all work will be \$8,500.00

Application Narrative

Right now the driveway is grass and dirt. You can see by the photos that it gathers water at the end toward the street. It has to be mowed now at the present.

We would like to install an asphalt driveway to make it neater, and more appealing, along with keeping tenants from tracking mud, into the house. A great alternative is the Greenway product that will allow the water to drain into the water table because it is a pervious paver system.

The size of the driveway will be 1546 square feet. It will go right up to the garage area.

The landlord will maintain the improvements. (although the product is fairly maintenance free.

Ron Jennings construction will complete the work.

Seminary Ave is an area that is heavy in its student population. This area has a growing population and many of the properties are being rehabilitated. It certainly adds to the neighborhood. This improvement will help to add to the aesthetic quality of the property and therefore to the area and city. In addition, the water is allowed to penetrate the material, and enter the ground water. The water will not run off.
